WALZ Label & Mailing Systems

Kewill Clippership©

Clippership is the most widely deployed parcel shipping solution on the market today and enables users to achieve new levels of shipping automation, easily efficiently and cost-effectively.

This powerful, PC-based solution enables organizations to ship with multiple carriers from one system eliminating the requirement for shippers to learn multiple systems.

Rate and service shopping to determine optimal shipment rates and routing allows Clippership users to significantly reduce freight expenditure. Organizations shipping 100+ packages a day normally see a return on investment within 6-12 months through reduced freight costs alone.

Clippership provides easy maintenance of carrier compliance and allows you to submit manifests electronically and generate compliant labels and documentation.

Using Kewill's integration tool (Kewill Integrate™) based on Microsoft's scripting language VBA, Clippership can be integrated with virtually any back office, order management or WMS. This flexible integration enables users to streamline the fulfillment process, eliminate re-keying errors and provide complete shipment visibility. Standard interfaces for most popular systems are available including: Activant, Great Plains, High Jump, Oracle, Radio Beacon, SAP and Sigma Micro.

"Clippership benefits you as a vendor by giving you the flexibility to add on carriers such as a Postal consolidator, allowing us to extend the savings of low-cost 'super saver' shipping to our customers. With cost comparisons just a click away, the low-cost shipping option definitely gives us a competitive edge as an online retailer."

- Bryan Handlen,
Vice President of Logistics,

Core Capabilities

Multi-Carrier Compliance

Automate shipping for all carriers. Enjoy the benefits of full carrier compliance, including compliance labeling, reporting, and electronic manifesting.

- BAX Global
- FedEx Express
- UPS
- US Postal Service
- DHL
- FedEx Ground
- UPS Supply Chain Services
- Eastern Connection

Rate Shopping

To get the best carrier rates and services, you need to shop around. Clippership provides you with all the information you need to get the best shipping rate for every package you ship.

- Clippership can shop for the "best" carrier based on cost, as well as weight, zone, and zip code

LTL Rating

Clippership's support of SMC3's RateWare® technology provides shippers with the most comprehensive system to manage compliance for parcel and LTL shipments. The solution offers a simplified process for updating LTL tariff information while the ability to rate shop across parcel and LTL carriers simplifies transportation decisions and reduces costs.

- A simplified process for updating LTL tariff information
- Accurate decision-making on transportation pricing for both parcels and LTLs
- Ability to define various discounting methods for LTL carriers
- Ability to import more than 3,500 different Rate Modules offered by SMC^3
- Reduced labor cost through fewer manual processes
- Faster responses to shipping inquiries
- One system to manage all transportation needs

Reporting

Clippership produces carrier manifest reports, as well as a number of standard reports that can be used for analysis and charge-back purposes.

- Get the kind of information you need to properly monitor shipping activity, analyze costs, and identify future trends by designing your own reports, forms, and queries.

Batch Tracking

This feature allows users to set up day(s)/time to automatically go to the UPS and FedEx websites and gather up-to-date information for a pre-defined range of shipping days. These tracking results can be stored locally, and users can then search through the tracking results using customer name, PO number, tracking number etc.

Integration into other Applications

An important aspect of a shipping system is the degree to which it can integrate into your larger information environment. Using Kewill Integrate, users can exchange information with virtually any other system and integrate with order processing systems, warehouse management applications or browser-based rating systems.

- Reduce customization costs and support
- Improve productivity by integrating with corporate legacy systems
- Improve reliability by leaving standard software applications intact

Alternate Rates

Calculate and compare alternate rates based on criteria such as negotiated and retail rates. This feature is useful for determining potential markups.

- Stores alternate "retail" rates, while the manifest maintains the actual carrier charges
- Provides data that can be used to generate expenses
- While designed for pack and ship operations, this module also provides value for sophisticated billing applications. For example, you may want to ship Next Day Air, but bill your customer for Ground freight
- Supports the FedEx Earned Discount Pricing Program - as you meet your negotiated shipping volumes Clippership is automatically updated with your discounted rates.

Printing Solutions

Clippership supports forms and carrier-required documentation such as Manifest reports, Shipping, tracking and compliance labels, DOCTag, Invoices
