

## RedBeam Inventory Tracking

Intuitive, affordable, complete data collection solutions!

### *Inventory tracking made easy!*

RedBeam makes inventory tracking easy! Track item levels and movements, and take physical inventories or cycle counts using this comprehensive inventory tracking application and easy to use mobile computers. Ideal for tracking inventory levels and item movements in stockrooms, small warehouses, and within departments of larger organizations, this solution lets you know what you have on the shelf, when to order more, and take periodic physical inventories or cycle counts.

Easily receive, move, and issue inventory items using existing manufacturer barcodes. You can also print your own labels directly from the system. In addition to basic inventory level and transaction information, track item information including item ID, serial number, lot number, expiration date, item type, cost, stock min/max, and more. All transactions are date/time stamped and will show who performed the transaction through role-based user security.

Barcode technology streamlines the physical inventory or cycle count process significantly. Using the mobile device, simply scan a location ID, scan an item into that location, enter the quantity, and move on. When finished, you can report on inventory counts and variances.

Managers know that tracking inventory effectively is vital to improving accuracy and ensuring sufficient inventory levels, but inventory software designed for large enterprises can cost tens of thousands of dollars. RedBeam Inventory Tracking is used by a wide variety of organizations, including state, local, and federal government agencies, small to large businesses, and other entities to optimize purchases and increase accountability. If you are looking for an effective inventory management solution to optimize purchases and increase accountability, but don't want to break the bank, then look no further. From stockroom to warehouse inventory, this system can help you get there!

## System Requirements

- Windows XP, 2003, Vista, Windows 7
- Pentium IV or Greater Processor
- 512 MB RAM, 1 Gig Free Hard Disk Space
- Microsoft ActivSync Software or Windows Mobile Device Center (Free Download)
- Microsoft SQL Server 2000, 2005, or 2008 (if more than 10 concurrent licenses)
- Compatible Printer Hardware (any laser or dedicated barcode label printer that uses Windows drivers)

## Key System Features Include:

- Easy-to-Use PC Interface
- Intuitive Mobile Computer Screens
- Search for Items Using Mobile Computer
- Detailed Vendor Purchasing Records
- Serial #, Lot # and Expiration Date Control
- Import and Export with Microsoft® Excel
- Barcode Label Printing
- Robust SQL Database
- Single or Multi-User Network Versions

## Benefits:

The system is designed to:

- Speed Up Asset Tracking Process
- Improve Accuracy
- Locate Inventory Easily
- Track Item Movements
- Optimize Purchasing
- Reduce Inventory Levels
- Minimize Out of Stock Situations
- Increase Accountability
- Reduce Shrinkage
- Minimize Paper Work
- Create One Central Inventory Database
